BEFORE CARE

- NO Alcohol consumption prior to procedure – It will cause more sensitivity and possible pinpoint bleeding.
- NO ASPIRIN or Vitamin E – No “blood Thinners” ...for 3 days prior
- You may want to take an oral antihistamine (i.e. Benadryl) one hour prior to treatment
- Delicate skin or sensitive areas may redden or swell slightly, therefore, it is advised to not make social plans for the same day.

OUTER HEALING TIME completes in about 3-5 days for the eyes

INNER HEALING TIME completes in about 3-4 weeks for the eyes

OUTER HEALING TIME completes in about 7-10 days for the lips.

INNER HEALING TIME completes in about 6-8 weeks for the lips.

EYE LINER:

- Eyes will appear swollen for a couple of days similar to that of crying.
- How easily a person bruises and swells may be affected by age, food and meds consumed, and hormonal cycles.

- If unwanted hair is normally removed in the area to be treated, any waxing should be done at least 24 hours prior to your procedure; electrolysis no less than five days. Do not resume any method of hair removal for a week after a procedure.
- If you wear contact lenses and are having an eyeliner procedure, do not wear your lenses to your appointment and do not replace them until the day following your procedure.
- If you are having a lipliner procedure and have EVER had a cold sore/fever blister, chicken pox or shingles, the procedure will almost always activate the virus responsible for the eruption.
- You may wish to ask your physician for a prescription for 400 mgs. of ZOVIRAX or ACYCLOVIR. This should be taken 2 times a day for 2 days before and 4 days after the procedure; a total of six days (6) days. (Or as prescribed by your physician). This protocol may prevent or minimize an outbreak.
- For those wanting an alternative approach, the amino acid L-Lysine is available at health food stores and the dosage should be increased to double the recommended and taken 4 days prior and 4 days after the procedure.
- Permanent makeup will appear extremely intense and thick immediately following the procedure.
- The excess pigment is shed off over the next couple of days. Colors will continue to soften over the next couple of months.
- Colors for lips and brows may look strange for the first few days. Lips will peel for a week and it may seem like there is not much color or even no color left in your lips.
- It will start to show more after 3 weeks as the internal healing completes. This is normal!

NOTE: Permanent cosmetic procedures are affected by the canvas (your skin) that they are performed on. If your skin is sun-damaged (even from tanning beds), thick and uneven in texture, or excessively dry or oily, the result cannot be expected to be perfect after the initial procedure. Scars on the lips from fever blisters cause pigment removal. Lifestyle, medications, smoking, metabolism, facial surgery, and age of skin all contribute to fading. Touch-ups are needed 30 days after your initial procedure to ensure the best result and to keep your permanent cosmetics looking the best. Your procedure maintenance, as outlined in your pre and post procedure directions, is very important.
